

TLL TRADE LIFTS

360 | 1280

ROBUST TRADE LIFT FOR SIDE/REAR LOADERS

We know you want lifts that are reliable, safe, flexible and rarely out of service. That goes without question. With increasing targets and KPIs to hit, sometimes you want more. You want to track collections and measure waste. Look no further than our range of TLL lifts.

Whether you want to lift 360L wheelie bins or 1280L 'bring' containers, the TLL 1280 can meet your needs, lifting any container meeting the EN840.1, EN840.2 and EN840.3 specification, as well as Paladin containers with conversion bars.

Looking for a lift for continental-style bins? The TLL 1280 can cope with that too. It can be fitted with the DIN arms that are required for safe lifting.

If you know your vehicle will only be used on rounds collecting smaller two-wheeled bins, the TLL 360 is the lift for you. Robust and reliable, it is designed for lifting two-wheeled bins from 140L to 390L with a maximum weight of 150kg that meet the specification EN840.1.

With 'plug and play' installation, the TLL range is simple to fit. If you have the expertise, we can supply it to you direct in a flat-pack, with options to buy enhanced features, or we can complete the whole installation for you.

Needless to say it comes with the host of safety features and robust reliability that are synonymous with the Terberg brand – including emergency stop – and is available in three different sizes for easy fitting to the sides or rear of vehicles.

Going the extra mile for efficiency? You can fit an RFID reader onto your TLL lift that will identify the unique code of an RFID chip attached to a bin, keeping track of collections.

Want to weigh the bins? The Terberg automatic weighing systems will take a measurement while the bin is being lifted – it couldn't be easier.

The TLL range of bin lifts provide a practical solution to container collection on existing and new vehicle bodies. They can be supplied as a kit or installed at the factory.

- **Integrated, compliant Emergency Stop system**
